

Before running **CatControllerTest** make sure the id you are providing to read does exist in database.

As the id is auto generated provided data will be inserted but its id would be autogenerated.

Same goes for **CatServiceTest,DogServiceTest,DogControllerTest,EmployeeServiceTest,EmployeeControllerTest,PetOwnerServiceTest,PetOwnerControllerTest,VolunteerServiceTest,VolunteerControllerTest**

For **SaleServiceTest** and **SaleServiceControllerTest** make sure the applicant,employee,cat,dog you have provided does already exists

For **ApplicantServiceTest** and **ApplicantControllerTest** make sure cat,dog and petowner are there in database and also make sure that there is no other applicant for that cat and dog.

For **MedicalServiceTest** and **MedicalControllerTest** make sure cat and dog are there

.

Make concept applies to all others before testing make sure that the required data is there and as id of almost all the columns is auto generated make sure the id you are providing for read is there is database.
